I switched from local radio to XM satellite radio due to the fact that local radio was filled with commercials. I was never able to find music that I could listen with my children in the car that wasn't filled with commercials. The only downside when I first subscribed to XM radio was that I would have to switch to the AM channel to receive my local traffic report that would be on every 10 minutes on the "2's". This was annoying due to the fact that the AM channel was very brief in the problem areas but it was the only thing I had to use. As soon as XM announced that they would have local traffic and weather for the Philadelphia area, I was elated. I pay for this subscription, much like premium channel on cable. This should allow XM to provide services that customers like myself need and enjoy. Please reject NAB's petition 04-160.
